

## Tilting

These modern-day wind mills  
that don't mill anything  
spin  
so slowly

it's like they are doing  
no work at all, but  
here's what happens  
when you get up close:

imagine a house fan  
with 100-foot blades  
that sound like cars  
on a highway.

Imagine shadows passing  
like super tankers  
every 1-3 seconds,  
killing and resurrecting the sun.

~

Wind power will save us,  
they said, from ourselves.  
Renewable energy, they said  
and you think *That's good*

while you watch the blade tips  
pass just overhead and  
imagine the energy's potential  
impacting your body. Imagine

what would happen  
if the blades cut you apart  
as they spin every 1-3 seconds.  
They said *Dependence*

*on foreign oil and Fossil fuels.*

They used words like

*equality and freedom.*

Every 1-3 seconds imagine

the potential of this cycle

that turns spinning

into death over and over

and never runs out of power.
